

## Inspection Report

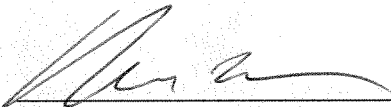

Date: September 16, 2015

Inspector: Mike Kramer

Site: Jarchem aka Honig Chemical  
414 Wilson Ave.  
Newark, NJ 07105

This was a producer establishment inspection conducted at JARCHEM AKA Honig Chemical located in Newark, New Jersey. The establishment was targeted based upon a list of active establishments in Newark as part of the MAVD initiative. Limited information regarding the production of pesticides reported on the 3540-16 (2012) pesticide production report was obtained and it was decided to schedule a comprehensive inspection of the establishment. I arrived at the establishment at 1:30PM. Credentials were presented and a Notice of Inspection was issued to Joe Rotunno, Operations Director. Honig Chemical is a subsidiary of Jarchem Industries and has reported no production for several years.

Following issuance of the Notice of Inspection, I inquired as to the status of production at the establishment. From 1988-1996 the establishment was toll producing Fungitrol C (EPA Reg. No. 11678-18-1100) and Fungitrol II (EPA Reg. No. 11678-1-1100) for Huls America. From 1997 on there has been no production. I recommended that they inactivate the establishment based upon the zero production since 1997. Mr. Rotunno stated that he would look into the matter and that they may need to maintain active status in order to bid on production contracts. The inspection was ended at 2:30PM.

Mike Kramer, Environmental Scientist
